Bridging the Gap Between Screen and Space

Redefining the Product Selection Journey

The Current Landscape

Digital wallpapers have evolved from "decorative background" to "primary home identity." However, the current UI journey remains transactional rather than inspirational.

(Source -:Research and Markets: Digitally Printed Wallpaper Global Report 2026)

Users spend roughly
60 seconds
on a mobile pattern page before deciding to stick or bounce

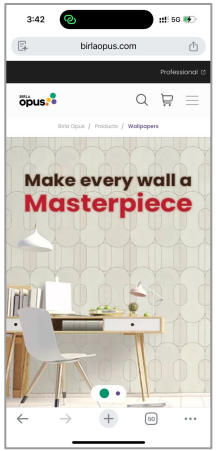

Source: Baymard Institute: Home & Hardware UX Benchmark 2026

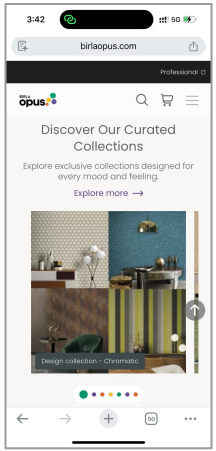

67.4%
mobile bounce rate occurs during the 'imagination' phase due to lack of scale context.

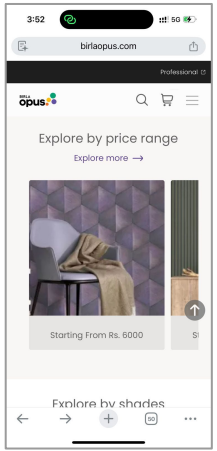

Source: UXtweak: Best 50+ UX Statistics for 2026

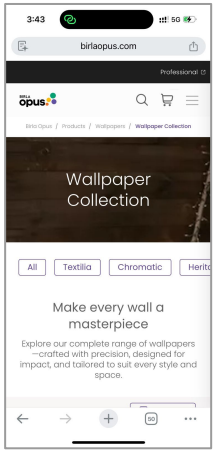

Fragmented Journey:
Users leave the site to search for "room inspiration" elsewhere.

Customer x Purchase Journey Mismatch

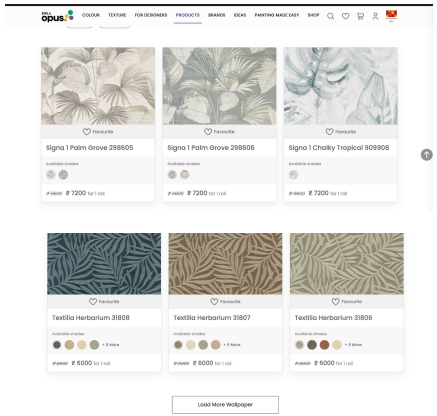

Home page & PDP relies on customer awareness of wallpaper aesthetics / clarity of intent prior to purchase. Product referencing demands customer to be educated of the catalogue.

High on Text, Low on Visual.

Fact: Most customers are seeking ideas/ inspiration/ do not clearly know what they want prior to purchasing a wallpaper (often hesitant due to the myths surrounding wallpaper). Customer's pattern understanding is limited.

Identifying Digital Friction

PLP - Desktop

The page heavily relies on scrolls and "View More" triggers for each sub-collection.
Impact: Users often mistake the end of a scroll for the end of the page. This prevents users from seeing the full variety of the catalog.

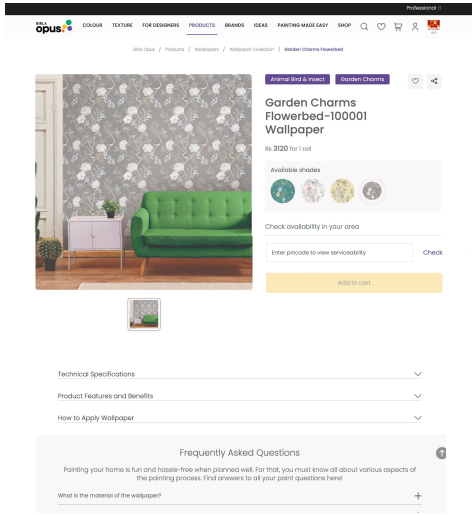

Missing "Quick View" & Interaction Lag- Here, the interaction often requires a full page load to see the product details.
Impact: High "pogo-sticking" (moving back and forth between PLP and PDP) leads to user fatigue. In the wallpaper category, where visual context is everything, not seeing a "wallpaper in a room" view immediately is a major miss.

birlaopus.com

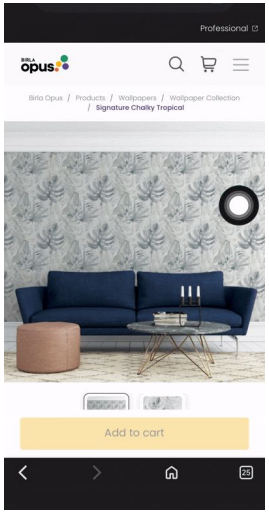

Choice Paralysis

PDP - Desktop

The page primarily relies on static swatches or close-up pattern crops. There is a lack of "lifestyle" shots that show the wallpaper on a full-scale wall with furniture.
UX Impact: Users struggle to mentally map how a small floral pattern will scale across a large wall. This leads to "choice paralysis" and fear of making a wrong purchase, ultimately increasing bounce rates.

While Birla Opus offers an "Imagine Machine" (visualizer). The user has to leave the PDP to go to a general tool and then search for the product again.
UX Impact: Broken User Journey. Any time a user has to "restart" their search within a tool, you lose momentum.

PDP - Mobile

Core Concept:
Closing the "Imagination Gap"

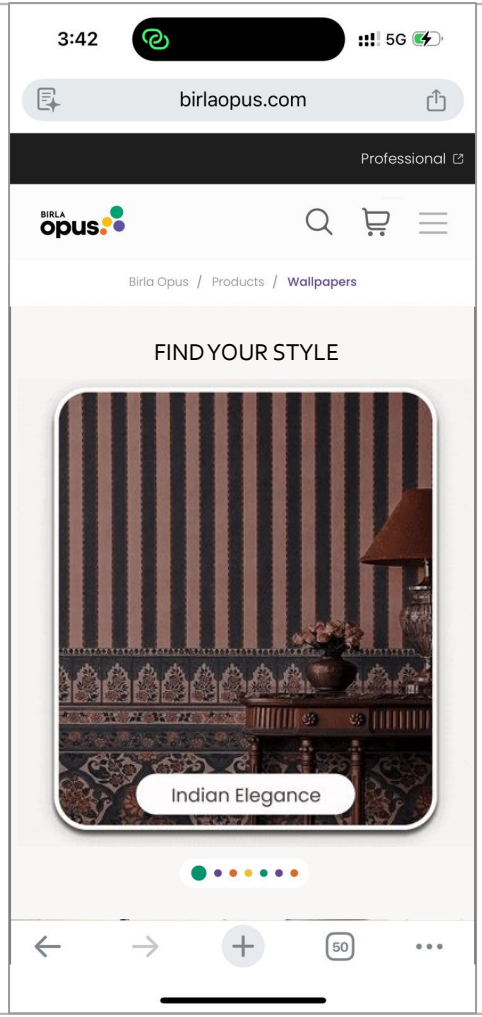

INSPIRE <> CLARIFY <> IMAGINATE

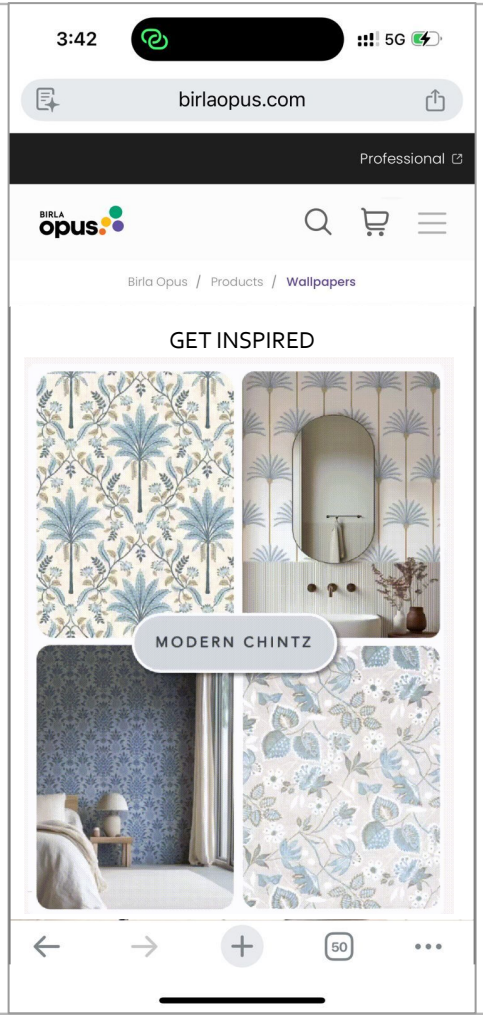

< INSPIRE >

Can we be his/her
PINTEREST / SPOTIFY / TINDER?

Assist in shopping by ‘style / inspiration / space’.

< CLARIFY >

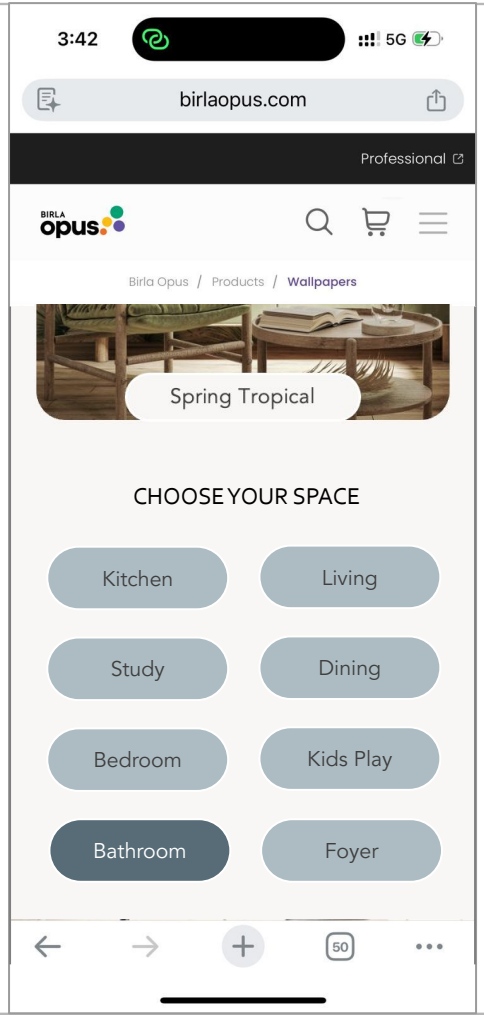

< INSPIRE >

Can we be his/her
PINTEREST / SPOTIFY / TINDER?

Assist in shopping by ‘style / inspiration / space’.

< CLARIFY >

< IMAGINATE >

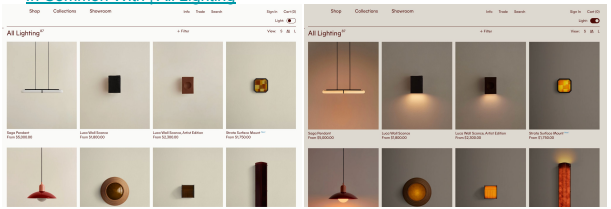

Research shows the biggest hurdle in wallpaper sales is the "imagination gap" customers love a pattern in a 2D thumbnail but fear how it will look on a full wall with their furniture.

The "Light-to-Dark" Toggle

Why it works: Wallpaper looks different under warm evening light versus bright morning sun.

Idea: A toggle that switches "lighting" on the room mockup. This builds **consumer trust** because they see the "true" color in all conditions.

In Common With | All Lighting

Roll Calculator

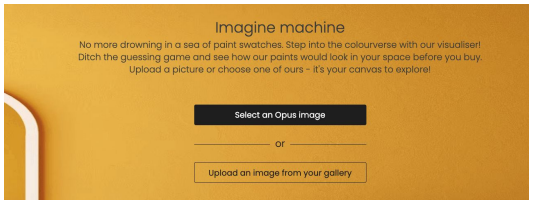

As the user enters their wall dimensions, show a graphic of how many rolls are required.

The Visualizer

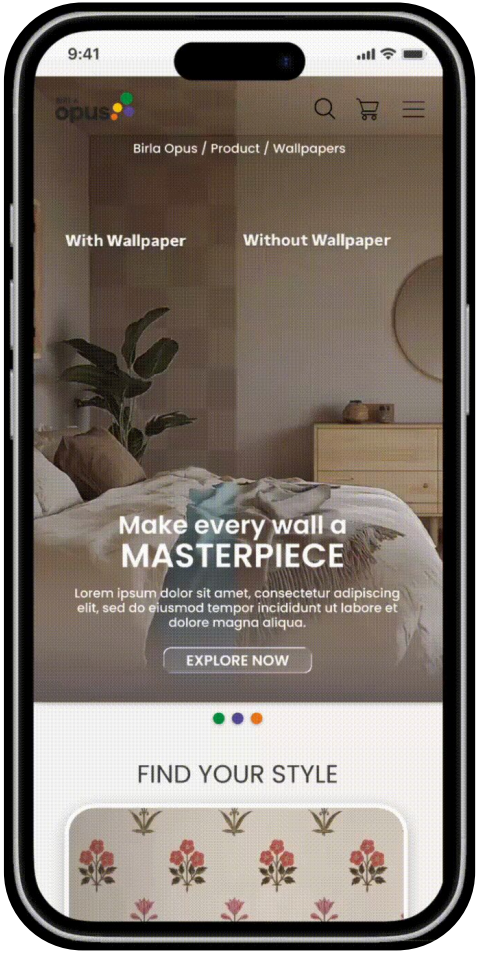

Integration of the "Imagine Machine" directly into the PDP. No more broken journeys, users see the wallpaper on their wall with one click.

The Ecosystem Advantage

Since Birla Opus also sells paint , the PDP should suggest 3-4 "Complimentary Paint Shades" that match the wallpaper colors
